Broadspire®
A CRAWFORD COMPANY

Company Size: 1,001-5,000 employees
Established Year: 1941

About the Company

Broadspire is a leading third-party administrator specializing in claims and risk management services for insurance companies, corporations, and government entities. They offer solutions in workers' compensation, liability, disability, and medical management, leveraging technology and data analytics to improve efficiency and reduce costs for their clients.

The Problem Statement

The Medicare system lacks efficient mechanisms to accurately reimburse providers for Medicare-covered items and services, leading to potential errors and delays in payment processing. This results in administrative burdens for both providers and Medicare beneficiaries, hindering the seamless delivery of healthcare services.

The Challenge

Despite recognizing the need for streamlining the reimbursement process within the Medicare system and addressing the complexities associated with determining payment responsibility among health insurers, existing solutions failed to effectively overcome key barriers such as outdated systems, manual processes, and disparate data sources. As a result, they have been unable to achieve the desired level of accuracy, timeliness, and efficiency in payment processing.

The Solution

By developing a platform that integrates with existing systems, our solution ensures accurate determination of payment responsibility among health insurers, facilitating a systematic and equitable payment process. Through streamlined workflows and real-time data insights, our solution reduces administrative burdens, minimizes errors, and enhances the overall efficiency of Medicare reimbursement, ultimately improving the delivery of healthcare services to beneficiaries.

Tech Stack

A tech stack consisting of .NET MVC framework, DevExpress UI controls, and Microsoft SQL Server for database management.
