

About the Company

This is a global company offering risk management and insurance claims services, specializing in innovative solutions to help organizations mitigate risks and improve operational efficiency. They provide end-to-end claims management and risk consulting services, leveraging advanced technology to streamline processes and drive positive outcomes for clients.

The Problem Statement

Traditional claim management systems lack efficient medical cost-saving solutions, leading to increased expenses for insurers and self-insured entities handling worker's compensation and injury claims.

The Challenge

The challenge lies in developing a web-based application that effectively addresses the need for medical cost-saving services within the realm of claim management for insurers and self-insured entities, while ensuring seamless integration and user-friendly experience.

The Solution

Spiralogics presents GBCARE CW, a comprehensive web-based application designed specifically for claim management, offering innovative medical cost-saving services tailored for insurers and self-insured entities handling worker's compensation and injury claims. By leveraging advanced technologies and data analytics, GBCARE CW streamlines the claim process, identifies cost-saving opportunities, and enhances efficiency.

Tech Stack

The tech stack encompasses .NET MVC and DevExpress for web application development, Java for backend services, MSSQL for database management, and SSAS for multidimensional data analysis.
